

## BOSSARD PICK-BY-LIGHT AND PUT-TO-LIGHT

# Light the way to seamless material flow

**Eliminate search times and minimize setup and refill errors. Bossard's SmartBin Cloud and SmartLabel Cloud solutions use intelligent LED light signals at supermarket and assembly workstations to guide employees straight to the right bin and the right material.**

Once a box is picked or refilled, confirmation takes place effortlessly via the intuitive ARIMS Mobile App. Item identification is just as simple – whether through text, barcode, or NFC – ensuring seamless and error-free material flow throughout your internal logistics.

### FEATURES

- 
**SEARCH BY TEXT, BARCODE OR NFC**

---

- 
**LED-GUIDED PICKING AND REPLENISHMENT**

---

- 
**ERROR-PROOF**

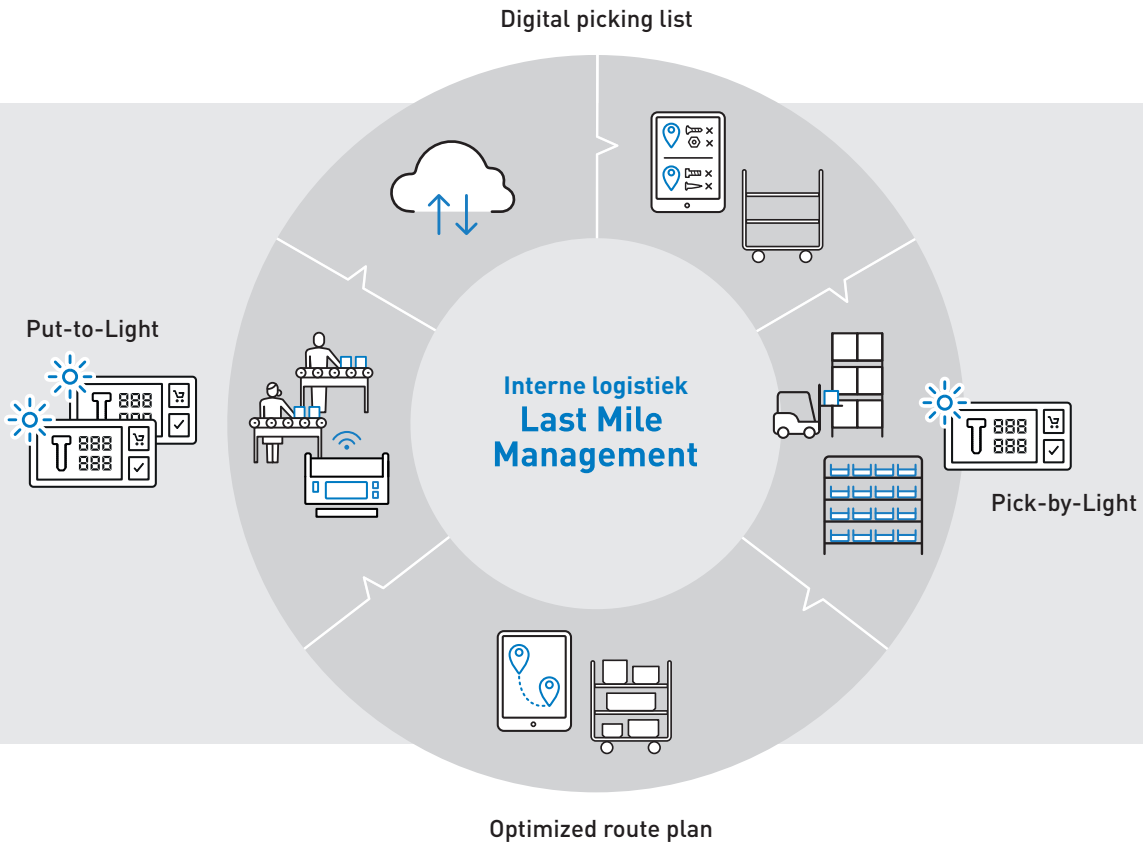

---

- 
**ARIMS MOBILE – PAPERLESS HANDLING**

### YOUR BENEFITS

- INCREASED PRODUCTIVITY**  
 Accelerated picking and replenishment times
  
- SMART ITEM FINDER**  
 Let the LED light up and locate your items in no time
  
- IMPROVES PROFITABILITY**  
 by optimizing material flow and reducing internal logistics effort

## BOSSARD PICK-BY-LIGHT AND PUT-TO-LIGHT

## BOSSARD PICK-BY-LIGHT AND PUT-TO-LIGHT

1. At the work cell, a demand request is triggered semi- or fully-automated – depending on the system.
2. The demand request is transmitted to the Bossard software ARIMS and is added automatically to the digital picking list.
3. With the help of a digital picking list and the LED light signal (Pick-by-Light), the material can be efficiently picked at the supermarket, pre-assembly, warehouse, etc.
4. The milk run/water spider receives a route plan to replenish the work cells: path-optimized, paperless, reliable and time-saving. The LED light signal (Put-to-Light) indicates the right box to be replenished.
