## Wheels and Castors

Solutions for every industry

## WHEELS AND CASTORS ASSORTMENT

# The little helpers of the movement

Our diverse range of wheels and castors meets various industrial requirements.

### Innovative design and high quality standard

Our range covers the special needs of simple apparatus wheels, transport equipment wheels and heavy-duty wheels and castors, whether for indoor or outdoor use for apparatus or industry with heavy loads, we have a solution for every application.

Whether castors..., smaller, rotating devices that are attached to furniture, equipment or transport trolleys. They offer excellent maneuverability and are often rotatable.

... or wheels, for larger, more stable constructions found on vehicles and machines. They are designed for linear motion and offer better stability and control.

### The use of wheels and castors offers a whole range of advantages:

#### **Easy alignment and assembly**

Wheels and castors allow for easy and quick assembly with a defined height. In this way, objects can be optimally moved, aligned and positioned in order to ultimately be stably secured.

#### **Security and stability**

Wheels and castors stabilize equipment, machines or transport platforms on uneven floors or surfaces. This reduces the risk of accidents, increases safety in the workplace and protects equipment and surroundings from damage.

#### **Protection against vibrations and shocks**

With wheels and castors, vibrations and shocks can be reduced, which extends the service life of machines and equipment. Optional rubber coatings provide additional stability for a smooth ride, which reduces rolling noise to a minimum.

## ASSORTMENT EXCERPT

### BN 52780 – EN 12530

Swivel castors with plate fastening, galvanized steel

### BN 52787 – EN 12530

Swivel castors with plate attachment INOX

### BN 52781 – EN 12530

Swivel castors with stop hole galvanized steel

### BN 52788 – EN 12530

Swivel castors with screw-on hole INOX

### BN 52782 – EN 12530

Swivel castors with wheel lock, galvanized steel

### BN 52789 – EN 12530

Swivel castors with wheel lock and with plate attachment INOX

## LINES

### Wheels for industrial logistics – light-weight

Applications Industrial wheels for light loads up to 230 kg, even in the presence of obstacles.

### Pallet Truck Rollers

These rollers are used to handle loads on hand trucks, hand pallet trucks and electric pallet trucks.

### Wheels for industrial logistics – medium-heavy applications

Medium-weight industrial wheels are recommended for handling loads that do not exceed 500 kg.

### Wheels for garbage cans

For waste collection containers, standard black or elastic rubber wheels are usually used.

### Wheels for industrial logistics – high loads and mechanical movement

Heavy duty industrial wheels are useful for handling, high loads, up to 4300kg/wheel, up to 16km/h

### Apparatus rollers

These adjustable feet and rubber feet are ideal for simple applications and large volumes.

### Heat-resistant wheels

#### High-temperature industrial wheels

carry up to 500 kg and withstand temperatures up to +300 °C; special rollers increase temperature resistance.
