YOUR BENEFITS

- Optimization of the material flow and reduction of movements in internal logistics
- Real-time consumption data for each work cell
- Increased efficiency due to shorter order and delivery times
- High reliability
- Flexibility in reconfigurations

BOSSARD LAST MILE MANAGEMENT

REPLENISHMENT PROCESS WITH BOSSARD LAST MILE MANAGEMENT

1. At the work cell, a demand request is triggered semi- or fully automated - depending on the system.
2. The demand request is online transmitted to the Bossard software ARIMS and is added automatically to the digital picking list.
3. With the help of a digital picking list, the material can be efficiently picked at the supermarket, pre-assembly, warehouse, etc.
4. The milk run / water spider receives a route plan to replenish the work cells: path-optimized, paperless, reliable and time-saving.
