Total Cost 5th Year:	\$6,569.62	\$3,947.87	+\$2,621.75

Disclaimer: Pump purchase price is indicative only and reflects manufacturers RRP as of 1st, August 2026. Energy cost calculations are based on a 50,000 litre pool and a pump running time of 8 hours per day with an electricity pricing of 32 cents per KW. The CTX 280 (1HP) pool pump would run at high speed (it's only available setting) for 8 hours; the XT P320 would run at eco (low) speed, medium speed and high speed at 6, 1 and 1 hours per day respectively.
