The soya bean is the world's most consumed oilseed and the most cultivated and profitable crop in Brazil, says Proinde on its [website](#) . The correspondent further explains that expansion of harvested areas and use of advanced technology to improve productivity have resulted in an almost two-fold increase in Brazil's soya bean export over the last decade. Because of the ongoing US-China trade war, Brazil has also regained its position as the world's largest producer and exporter of soya beans.

Proinde's comprehensive guide “ [Loading soya beans in Brazil](#) ” of November 2020 looks at the bean's importance to the country today and in an historical perspective, describes the country's domestic transport and port systems, explains how the national soya bean quality and grading standards work, and discusses risks associated with its stowage, loading and seaborne carriage. We believe Members and clients will find this guide both an interesting read and a useful source of reference.
