Due to unforeseen circumstances, these estimates may change in the future. Estimates and their assumptions are considered continuously, and accounts adjusted accordingly.

Insurance contract liabilities are the main items in the balance sheet based upon judgements and estimates. Estimates have to be made both for the expected total cost of claims reported and for the expected total cost of claims incurred but not reported at the balance sheet date. Standard actuarial methods are used in estimating the total cost of outstanding claims. The actuarial method uses historical data as one of the elements in the model to estimate the future claims costs. It can take a significant period of time before the ultimate claims cost can be established with certainty.
