Inverters 5/10/29.9/30kW and maximum power in kVA

Outlook for Q3 2026 and Q4 2026

Product Management

For Belgium: 5kW* inverters split into 5kVA and 5.5kVA

For most Belgian grid operators, the maximum apparent power (in VA) that may be installed on a 1-phase grid connection within the definition of a “small production installation” is limited to 5000VA.

1-phase inverters with a maximum apparent power >5000VA can only be used if the grid operator allows this and, for 3-phase connections, if the balance between the phases is respected.

*Not (yet) every inverter has a - for Belgium required - Synergrid Homologation certificate: check this in our webshop with the product, and if it is not listed there, check with Synergrid itself. See Synergrid list [C10/26](#). Not on the list = not suitable for Belgium.

For Belgium: 10kW*, 29.9 and 30kW* inverters; split by kVA

For Belgium, a 3-phase connection with a maximum inverter power of 10kVA is considered by official bodies and for VAT regulations as a small production installation. If the power is ≤30kVA, no additional grid disconnection is required.
